I am a MERN Stack Developer with strong knowledge of MongoDB, Express.js, React, and Node.js. I enjoy building responsive, user-friendly, and full-stack web applications with modern technologies. As a fresher, I have already worked on several personal and academic projects that helped me to improve my problem-solving and development skills. I am familiar with REST APIs, authentication systems, mongoDB database management, and responsive UI design. I am eager to learn new technologies, improve my skills continuously, and contribute to real-world development teams. I am looking for an opportunity where I can grow as a professional developer and deliver meaningful solutions.

Core Skills

HTML5, CSS3 (tailwind CSS), JavaScript (ES6+)

Frameworks & Libraries

React.js, Next.js, Node.js, Express.js, MongoDB,

Tools & Technologies

Git & Github, REST APIs

Language

Bangla (Native), English

Projects:

Modern Portfolio Website

- Developed a fully responsive personal portfolio using React.js, Next.js, and Tailwind CSS.
- Showcased technical skills, featured projects, and integrated contact functionality.
- Modern user interactive and optimized UI/UX design, performance, and cross-device responsiveness.

Full-Stack CRUD Application (MERN Stack)

- **Drive-Nest** is a modern car rental platform. Users can add their car, booking a car on a specific date and they can also manage their booking and car data such as delete, update, cancel etc.
- A scalable full-stack web application with MongoDB, Express.js, React.js, and Node.js.
- I built the whole application including mobile, tab & desktop responsive UI, JWT-based authentication system, booking system, user and booking related data storing, notification and all everything.
- Server side repo : [drive-nest server side repositories](#)
Client side repo : [drive-nest client side repositories](#)
Live Site : [Drive Nest](#)

Dynamic Web Applications

- **Summer-essential-store** is an all device responsive UI E-commerce platform to buy only summer products, a user can explore all the product and order, they can create profile and update their info.
- Created interactive e-commerce web applications using Tailwind, Nextjs, Better-Auth and MongoDB.
- I fully built the project with responsive, google login system and email-password based login, also i added a field to update user data. Finally I deployed the project to vercel.
